Delivering Solutions

We believe our advantageous product offering, extensive distribution network, and experienced sales representatives are the best in the country and deliver real solutions to our customers. JohnDow products can be found through virtually every tool and equipment distributor in the country. Please click on the distributors link to locate a JohnDow distributor near you. Our sales agencies are also available to help our customers with any question or request they may have. No request is ever too small.

Portable Fuel Storage & Handling

Fuel Chief represents the fastest growing product segment in the JohnDow family of automotive service equipment – professional fuel handling equipment. The need for safe, effective, and affordable portable fuel storage to meet the requirements of a myriad of applications and industries has never been greater – and the Fuel Chief line of portable fuel handling equipment meets those needs.

The Fuel Chief line offers more portable gas caddy models than any other company in the country:

- FM Approved models for professional, fuel system related service work
- Poly models with different capacity for basic fuel storage needs
- The first with professional FM Approved models for the unique demands of alternative fuels and flex fuels

Fuel Chief can handle the fuel – on the go, at work, or at home.

Fuel Chief fuel caddies are great for storing and transferring fuel to lawnmowers, generators, heaters – as well as to gravity-fuel boats, ATV's or PWC's.
